⚡ MASTER PRODUCTION RELEASE V3.0 • ADVANCED QUANTITATIVE EDGE

Trade with Mathematical Certainty & Institutional Conviction.

The Lion Capital Solutions (TLCS) is an institutional-grade, multi-market algorithmic trading suite bridging advanced Frank Ochoa Swing Trade Pro 2.0 auction theory, deterministic Python BlackBox execution, and real-time mobile intelligence.

🏛️ THE FOUR PILLARS OF THE TLCS PLATFORM SUITE

PWA APP — TLCS Mobile Terminal (`market-store.online`)

Progressive Web App built in Next.js 14 & Tailwind. Features 6 institutional tabs: **HUB** (Live Signals & Collapsible Filters), **LOGS** (Real-time telemetry), **SCREENER** (7-day matrix), **INSIGHTS** (Stocks with Action), **MARKETS** (Multi-asset curves), and **ANALYTICS** (22 risk tearsheet metrics).

AUTONOMOUS — DhanHQ Python BlackBox Engine (`algo_engine/`)

Fully standalone quantitative execution daemon connected to live DhanHQ WebSockets. Ingests NSE Top 100 Equities & MCX front-month commodities, aggregates 15m/1D candles, computes CPR & Camarilla math, and auto-executes without TradingView dependency.

ALGO ENGINE — TradingView Pine Script v6 Indicator (`TLCS v3.0`)

Canonical master indicator deployed across 3,567 lines of mathematical logic. Implements Central Pivot Range (CPR), Camarilla H4/L4 Touch-Point Gating (wick entries), Symmetrical Neutral Zone Scalp Alerts, and confirmed regular & hidden divergence detectors.

WEB PORTAL — TLCS Web Dashboard (`thelioncapitalsolutions.com`)

Institutional desktop terminal featuring dynamic 7-day day type blueprint matrix, multi-asset virtual paper portfolio, Razorpay subscription checkout, real-time audio chime triggers, and Netlify edge serverless webhook workers.

⭐ THE TLCS GROUND-TRUTH STANDARD: ZERO GUESSWORK, EXACT MATH ONLY

Unlike commercial black-box indicators that repaint past bars or cherry-pick fictitious win rates, TLCS enforces an absolute **Exact Percentage Return standard**: `((Exit – Entry) / Entry) * 100` verified by PostgreSQL triggers on every closed trade. Breakeven trades are always accounted for in the win rate denominator.

🎯 MASTER SIGNAL FAMILIES & HIGH-CONVICTION TRIGGERS

🔥 SCALP ALERT

Neutral Zone Confluence

Fires strictly outside Greenzone and Redzone boundaries in the authentic Neutral Zone. Ensures highest-conviction momentum expansion with zero adverse structural resistance overhead.

📐 BREAKOUTS

Normalized Narrow CPR

Identifies extreme intraday price coiling where Central Pivot Range width is < 5.0% of the previous day's range (NCPR < 5.0%), forecasting explosive volatility breakouts.

⚡ LIGHTNING

Dual Flow Confluence

Combines institutional Missile breakout order flow with Scalp liquidity capture for rapid trend expansion during Opening Range Breakouts and volatile momentum bursts.

〰 DIVERGENCES

Regular & Hidden

Unconfirmed on Bar 0 to prevent whipsaws. Trade entry strictly gates to subsequent candle confirmation close with 6-bar sliding memory and extreme level invalidation.

🛡 REJECTIONS

CPR Boundary Reaction

Detects sharp rejection reactions at CPR Top (DTc) and CPR Bottom (DBc). Validates responsive institutional auction behavior with tight structural invalidation stops.

🚀 CONTINUATIONS

Out of Value Expansion

Identifies directional auction drive beyond initial balance and previous day's Value Area High/Low. Engineered for sustained intraday trend trailing.

📊 FRANK OCHOA SWING TRADE PRO 2.0 SCREENER MATRIX

Built directly on Frank Ochoa's institutional auction profile methodology, the TLCS Screener Matrix tracks 7 continuous sessions across 5 core Day Type Blueprints and 4 Trade Sequences:

BLUEPRINT / SEQUENCE	MARKET AUCTION CHARACTERISTIC	INSTITUTIONAL EDGE
Rejection Day Blueprint	Price tests boundary extremes outside prior range, fails to find buyers/sellers, and violently reverses.	High-probability mean reversion targeting opposing Value Area High / Low boundaries.
Absorption Day Blueprint	Institutional accumulation or distribution holding price within narrow high-volume absorption zone.	Forewarns of impending explosive breakout once absorption inventory clears.
Failed New High/Low (FNH/FNL)	Price attempts expansion past prior swing extreme but instantly closes back inside range.	Trap rejection play capturing liquidity from trapped breakout traders.
Outside Day Blueprint	Day's high exceeds prior high AND day's low exceeds prior low with wide candle expansion.	Signals extreme volatility expansion and two-way institutional re-pricing.
Stop Run Day & Sequence	Engineered push past key swing pivots to trigger retail stop clusters before rapid reversal.	Institutional spring/upthrust entry with superior Risk-to-Reward ratio (1:3+).

⚡ Expanded Default Screener Views

In Version 3.0, both the **TLCS Screener Matrix** and the **DhanHQ Screener Matrix** initialize in the **EXPAND** state by default, delivering immediate market blueprint visibility upon launch with instant collapse toggles.

🔍 Out of Range / Out of Value Bias

Section 4 of the DhanHQ Screener scans Indian market equities and commodities opening entirely outside the prior day's range, classifying directional expansion vs breakdown bias from the opening bell.

DETERMINISTIC RISK MANAGEMENT & TRAILING SL MACHINE

Capital preservation is the cornerstone of the TLCS quantitative ethos. The platform replaces ambiguous floating stops with an automated 5-stage deterministic trailing machine:

1. Initial SL Bound
Strictly anchored to Camarilla pivot / EMA barrier with absolute loss sanity guards.

2. Midpoint Breakeven
50% distance to TP1 `(Entry+TP1)/2` automatically advances SL to Entry (B/E).

3. TP1 Locked
Upon TP1 target hit, SL is permanently locked to Entry; zero round-trip losses permitted.

4. Step Trailing
TP2 hit trails SL to TP1; TP3 trails SL to TP2; runners transition to dynamic EMA trailing.

MULTI-MARKET UNIVERSE COVERAGE

MARKET SEGMENT	REPRESENTATIVE INSTRUMENTS COVERED	EXECUTION FEED
NSE 50 & Top 100 Equities	RELIANCE, HDFCBANK, INFY, TCS, ICICIBANK, SBIN, LT, BHARTIARTL, TATAMOTORS...	DhanHQ WebSocket & TradingView
MCX Commodities	CRUDEOIL, CRUDEOILM, NATURALGAS, NATURALGASM, GOLD, SILVER, COPPER, ZINC...	DhanHQ WebSocket & TradingView
NYMEX & US Commodities	WTI Light Sweet Crude Oil (CL), COMEX Gold (GC), Silver (SI), Brent, Natural Gas (NG)...	Real-Time Webhook Feed
Cryptocurrency Derivatives	BTCUSDT, ETHUSDT, SOLUSDT, BNBUSDT, DOGEUSDT, XRPUSDT, AVAXUSDT (Top 25)...	Binance WebSocket & Webhooks
Global Forex & Indices	EURUSD, GBPUSD, USDJPY, AUDUSD, USDINR | US30, NAS100, SPX500, DAX40, NIKKEI...	Institutional Multi-Feed

MEMBERSHIP ACCESS & VIP TELEGRAM CHANNELS

Essential Suite
₹2,999 / month

- Access to Mobile Terminal PWA
- Live Signals on HUB & LOGS
- 7-Day Screener Matrix
- Virtual Paper Trading Portfolio
- NSE Top 100 Stocks Coverage

MOST POPULAR Pro Institutional
₹5,999 / month

- Everything in Essential Suite
- Full MCX Commodity Futures Coverage
- VIP Telegram Instant Trade Alerts
- Breakouts & Scalp Alert Filters
- 22 KPI Quantitative Tearsheet

Master Enterprise
₹11,999 / month

- Everything in Pro Institutional
- Global Markets (NYMEX, Crypto, FX)
- Autonomous BlackBox Strategy Feeds
- TradingView Indicator Source Access
- Direct Priority Developer Support

Ready to Upgrade to Institutional Algorithmic Trading?
